

## PROBLEM SOLVING ACTIVITY: A DIFFERENT VIEWPOINT

**INTRODUCTION:** We view the solar system from Earth. Imagine how it must look to intelligent beings from another planet! In particular, how might those creatures view the Earth- its different physical, chemical and biological parts.

### TASK:

- Use your ideas to write several pages about the Earth that would be included in an alien's textbook on the solar system. The title of the book might be called Neptune Science - not Earth Science!!!

OR

- Write a short story called "A Trip Around Planet Earth" in which you describe your home planet to an alien from another planet. Assume that the alien has never been to Earth.
